PROJECTS

SMS SPAM DETECTION

Developed 'SMS SPAM DETECTION' which is a prediction model to detect whether the given SMS is spam or not efficiently using text classification and machine learning techniques.

AUTOMATED RELEVANCE SCORE PREDICTION SYSTEM

Developed a model which evaluates the answer given by the user against the model answers and classify the user into different classes depending upon the key parameters used for evaluation.

EMERGENCY RESPONSE PLATFORM:

Developed a tool that will capture requests based on various emergency types like medical emergency, law and order situation, disaster assistance etc. With the help of maps, admins, ERT teams will be able to monitor alerts and route to the location of distress.
